JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

on. Baker's premises, experience shows, are the most liable to bubonic plague, and the fact that to obtain the signature of the president of the baker's association to their petition the committee had to send to the plague hospital at Jurajuba, where he is a patient, is significant enough. To stamp out the seeds of the plague no measures can be too strict, or where adopted, be too strictly observed. The principal agents of the contagion are rats, fleas, and cats. It is against them that the campaign must be waged, and bakers must submit to inconveniences like others. It is, however, somewhat unjust that they alone should be put to expense for the benefit of the rest. No doubt no new bakeries should be constructed except on the lines laid down by the authorities. But, seeing that the bakers were only lately forced to introduce costly alterations into their premises, it would be only equitable were fresh works entailed by the new regulations undertaken at public expense.

Dr. Oswaldo Cruz says further, "Prevention is better than cure. It is better to kill mosquitoes than even to cure yellow-fever patients, so we are washing and cleaning and scouring all dark and damp places. The Hospital da Miserecordia has been cleaned and fumigated from floor to roof, and 1,236 kilograms of sulphur, 615 kilograms of Persian insect powder, 68 liters of alcohol, 9,643 sheets of paper, 600 liters of petroleum, 20 boxes of matches, and 1 kilogram of vaseline have been employed in the process."

#### BRITISH HONDURAS.

##### *Report from Belize, fruit port.*
